User Case #1

Amateur astronomer will find the current location of the ISS above the Earth.

User will read the description (“click the button to see the current location of the iSS shown on the map to the right”) and click the submit button.

Button

SECTION

Response

Display:

- 1. Map of the earth’s surface
- 2. Icon representing the ISS

An icon representing the ISS will be positioned above a map of the Earth’s surface, with the ISS current location in lat/lon directly below the icon.

Text describing the response will display below the map and icon, e.g. “The ISS is currently located over the earth at LAT/LON”, supplying a location name if possible.
